Professional overview

Operations-minded technical partner working remotely since 2011, with a BS in Information Technology. I support executives and lean teams with organized workflows, then build the systems behind them: Google Apps Script tools, automations, monitoring dashboards and data quality checks, with human approval wherever communication or decisions are involved.

Selected verified results

90+ workflow environment: managed a 90+ workflow Zapier automation environment, migrating selected high-volume workflows to Google Apps Script.

~381K tasks over seven months: replaced four high-volume Zapier steps with one Google Apps Script solution, reducing approximately 381K automation tasks over seven months.

8 team-specific leave workflows consolidated into one master workflow with calendar and Slack integration.

Paid leave workflows replaced by PTO Central, a free Apps Script system with dual approval and protected-leave privacy.

Core competencies

- Executive support: calendar, inbox triage, follow-ups, documentation
- Workflow design, process mapping and SOPs
- Automation build, migration and cost reduction
- Monitoring, alerting and failure recovery
- Data validation, QA and reporting dashboards
- AI-assisted research and development with human review

Technical stack

Google Apps Script · Google Workspace · Google Sheets · JavaScript · HTML/CSS · REST APIs · Webhooks · OAuth basics · ClickUp · Zapier · Slack · HubSpot · QuickBooks · Jira · Python · AI-assisted development

FEATURED CASE STUDIES

Systems I build

INTERNAL IMPLEMENTATION real system I built and run, shown with sample data · CONCEPT proposed design, not a completed integration · No client data is included.

INTERNAL IMPLEMENTATION

PTO Central · HR workflow system

Problem	Time-off requests were spread across forms, spreadsheets, separate approvals and manual follow-ups.
My role	Designed, built and maintain it end to end.
Solution	Apps Script web app with role-based views, manager → HR dual approval and protected-leave privacy; integrates Calendar, Gmail, Slack, ClickUp and HRIS.
Result	Verified: replaced the Zapier-based leave workflows with a free system. Live demo ↗

INTERNAL IMPLEMENTATION

Sync Runs Dashboard · Automation monitoring

Problem	Automated syncs between systems could fail or stall without anyone noticing.
My role	Built and maintain the dashboard, watchdogs and recovery tools; investigate root causes.
Solution	Apps Script dashboard with run history, success and failure states, exceptions, retry and investigation status.
Result	Verified: in daily production use. Run counts in the demo are illustrative. Live demo ↗

INTERNAL IMPLEMENTATION

Data QA System · Validation pipeline

Problem	Operational data needed consistent validation before it could be trusted downstream.
My role	Designed and built the pipeline, ran shadow-mode parity checks, managed the cutover.
Solution	Multi-stage Apps Script pipeline: validation, retry queue, circuit breaker and issue tracking.
Result	Verified: replaced four high-volume Zapier steps with one Apps Script solution, reducing ~381K automation tasks over seven months. Live demo ↗

CONCEPT FICTIONAL DATA

Executive Communication Hub

Problem	Executives lose time sorting what needs action, a decision, or just reference.
My role	Concept design and interactive prototype.
Solution	Proposed flow: authorized email intake → processing layer → AI assistant layer → Action / Decision / FYI hub → human approval before anything is sent.
Result	Illustrative only. No email account or AI assistant is connected. Try the prototype ↗
